

Caleb Van Lue

(260) 338-3440 | vanluecaleb@icloud.com | calebvanlue.com | Indiana, US

SOFTWARE ENGINEER & TECHNOLOGIST

Results-driven technologist with experience designing, supporting, and optimizing scalable business systems across cloud platforms, logistics operations, APIs, mobile solutions, and enterprise tooling. Skilled in systems integration, process automation, data management, infrastructure collaboration, and cross-functional problem solving. Strong background in improving operational efficiency, supporting mission-critical workflows, and translating business needs into reliable technical solutions.

PROFESSIONAL EXPERIENCE

Self-employed | Indiana | Sept. 2025 - Present

Technologist

- Designed, deployed, and maintained a self-hosted TrueNAS server environment supporting 24/7 media streaming, network video recording, DNS services, network-wide ad blocking, and cloud backup workflows.
- Managed ongoing server administration tasks including uptime monitoring, storage pool management, replication, permissions configuration, backup strategies, and service reliability troubleshooting.
- Gained hands-on experience with networking fundamentals, Docker containerization, self-hosted infrastructure, and distributed service management through day-to-day operation and expansion of my home lab.
- Developed and maintained personal web applications using Next.js to strengthen modern web development skills and explore new frontend and deployment workflows.
- Skills: TrueNAS, Docker, Networking, DNS, Linux Administration, Backup & Replication

Ferguson | Fort Wayne, IN | March 2025 - Sept. 2025

Software Engineer

- Collaborated with cross-functional teams to develop public-facing websites, data administration tools, and dynamic APIs serving Ferguson's diverse client base.
- Built and maintained scalable web services that handle complex business requirements across various product lines
- Developed custom data migration scripts to ensure reliable data replication between development and production environments.

- Skills: Next.js/Tailwind CSS, NestJS (TypeScript), PostgreSQL, WordPress, GraphQL, GCP

Sweetwater Sound | Fort Wayne, IN | May 2022 - Oct. 2024

Software Engineer

- Designed, developed, and deployed cloud- and mobile-based logistics tools via MDM and cloud solutions.
 - Reduced redundancy in warehouse pick routing, improving associate travel times by 35%.
 - Implemented failsafe systems around critical workflows, reducing incident recovery time and automating that recovery where possible.
 - Led efforts to optimize database schema across cloud and on-prem storage, reducing query execution times by up to 90%.
- Built and maintained ~15 scalable REST APIs and applications leveraging modern technologies (React, Vue, Kotlin) for critical distribution workflows.
- Provided feedback and suggestions to engineers in the form of code reviews and pairing sessions, standardizing and documenting practices to reduce code variability.
- Collaborated with team and business leaders in agile sprint cycles to gather requirements, receive feedback, and ensure timely delivery of the requested solutions.
- Skills: NestJS (TypeScript), PostgreSQL, ASP.NET (C#), Apache Kafka, SwiftUI, Jetpack Compose, GCP

Ball State University | Muncie, IN | Jan. 2020 - Dec. 2021

Teaching Assistant: Computer Science Department

- Mentored 50+ students in mastering core software engineering principles, with a focus on object-oriented programming (OOP) and algorithm design.
- Enhanced curriculum through collaboration with students and faculty, determining most effective practices and expanding upon them to improve student retention and course satisfaction.
- Skills: Technical communication, collaboration, object-oriented programming

EDUCATION

B.S. in Computer Science | Ball State University | Muncie, IN | May 2022

Summa Cum Laude

- Relevant Coursework: Software Engineering, Data Structures, Algorithms, Programming Languages, Networking, Cloud Computing, Discrete Structures
